Penile Extender Following Radical Prostatectomy

During the next few months, my staff and I will be working with you to ensure the best possible results for your recovery from your radical prostatectomy procedure.

One of the issues we will be dealing with is penile rehabilitation. Sometimes before, and certainly after, your procedure, your ability to engage in normal sexual activity will be significantly diminished. This condition can exist for approximately six months to over a year, sometimes much longer. Our main concerns after the procedure are shortening of the penis and the ability to develop and maintain an erection suitable for intercourse.

I believe that these problems can be offset by use of a penile traction device before and after your procedure. The only device of this kind proven effective by clinical trials is the Fastsize Extender manufactured by Fastsize LLC of Aliso Viejo, California. The Extender has been proven to add girth and length to the penis and it will help you regain or maintain penile length. It is also the only medical grade device with a physician approved treatment protocol. The device is not covered by insurance, but by special arrangement with Fastsize, you can use the enclosed prescription form to order your Extender. As a prescription filled by a pharmacy, the Extender is eligible as a tax deduction from your annual health costs.

You can also order directly from Fastsize at the website: www.fastsize.com/pd
1-877-327-8749

Full instructions are provided with the Extender, and a medical helpline is also available.
